

Total Control and Management of Data Traffic and Security for Corporate SIM Cards

Manage all SIM cards easily through our web platform Netmon

Description

A web platform that enables you to **assign national and roaming data traffic to corporate SIM cards and monitor their usage in real time.**

You can **set usage thresholds and control policies** to be implemented upon reaching them: navigation blocking or slowing down, URL filters and notification sending.

This solution is suitable **for businesses** of any size and across various industries.

Advantages

Agentless Solution

It only requires APN configuration on mobile corporate devices

Cost Control

Optimizing data traffic usage and preventing unexpected bill increases.
